DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3 and 6-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Graves et al (US. 6,874,897 B2).

Graves et al discloses a bimorph mirror (Fig. 2, 14) presenting first and second layers of piezoelectric ceramic together (30 and 32) with at least one electrode serving to vary at least one curvature of the mirror as a function of at least one electrical voltage applied to the piezoelectric ceramics (column 2, lines 20-33), the mirror being characterized in that the first and second layer of piezoelectric ceramic are separated by a central core which forms a semi-rigid beam (34,

36), the thickness of the central core lying in the range 1 mm to 80 mm (column 4, lines 52- 63).

3. Claims 1, 4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Michelet et al (US 4,298,247).

Michelet et al discloses a bimorph mirror (Fig. 1) presenting first and second layers of piezoelectric ceramic together (1, 10) with at least one electrode serving to vary at least one curvature of the mirror as a function of at least one electrical voltage applied to the piezoelectric ceramics (see 6, 7, 8, 9, 15 and 16), the mirror being characterized in that the first and second layer of piezoelectric ceramic are separated by a central core in a silicon material (column 2, line 53) which forms a semi-rigid beam (2, 3, 12 and 13) the thickness of the central core lying in the range 1 mm to 80 mm (inherent since the mirror itself is 100mm as supported in column 2, lines 45-48).
